Restriction to one of the following inventions is required under 35 U.S.C. §121:

- I. Claims 1-30, drawn to a method of solid phase synthesis.
- II. Claims 31-66, drawn to a functionalized support.

The claimed inventions are distinct.

The scope of the functionalized supports to which the method claims are drawn far exceeds the scope of the claims that are drawn to a functionalized support *per se*. However, to the extent that there overlap between the functionalized supports of Group I and those of Group II, inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP 806.05(h)). Notwithstanding the foregoing restriction, in the event that Group II is elected, and claims therein found allowable, a portion of Group I will be rejoined therewith. The portion of Group II that will be joined with Group I will be that portion which requires the limitations on the functionalized support which were found to be allowable in Group II.

Applicant is advised that for the response to this requirement to be complete, an election of the invention to be examined must be indicated, even if the requirement is traversed (37 C.F.R. 1.143).

Applicant is reminded that upon cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).

. . . . .

In addition to the foregoing, applicants are required under 35 U.S.C. §121 to elect species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Regardless of which group is chosen for initial examination, the first "specie" to be elected is a specific functionalized support. If a specific formula is chosen, all substituent variables should be accounted for, including integer variables. In addition, a specific "support material" (corresponding to variable "SS") should be selected, such as a polyurethane tube or a polyester fiber or a polycarbonate sheet or a polystyrene disc in which the polystyrene is crosslinked with divinyl benzene, or a polystyrene bead in which the polystyrene is not crosslinked.

In the event that Group I is chosen for initial examination, an additional species election is required, namely, a specific compound that is the product of the synthesis.

Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a generic claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP 809.02(a).

Should applicant traverse on the ground that the species are not patentable distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. §103 of the other invention.
